

Company Profile

This organization was set up in 1971. The main objective of this group is to construct houses for allotment to the public in accordance with the guidelines issued by its State Government and the prescribed procedure. The emphasis is to construct houses for socially and economically weaker sections of the society. The organization has set up construction divisions, design cell, and other necessary steps for carrying out various activities.

The Government's role is vital and varied in a democratic system. The Roles include managing the economy, infrastructure, empowering the citizens, providing basic education and health services etc. The stake holders in a government industry have vastly different expectations. With the advent of modern technology and the government initiatives, government agencies today are embracing the latest technologies more like the private sector. For more streamlined practices, a government organization recently has considered the importance of professional project management techniques for successfully carrying out projects, particularly with accurate planning, monitoring and control through a strong methodology for effectively completing their housing projects.

Business Need

The major challenge for this government organization is the lack of understanding as most senior officials and project managers defer to traditional government practices. They don't always recognize how application of modern project management concepts can be utilized for better management of government projects, from the government initiatives to organizing and implementing new departments. That is why it decided to carry out assessment programs for the project managers to understand the level of their maturity in terms of Project Management.

Solution

AstroWix conducted the assessment programs to test the overall Organizational Project Management Practices and compare the response of the engineers with the response of the head of the organization. The assessment was divided into 3 parts. The assessment on Project Management Concepts and Applications judged the engineer's project management competency. The next assessment on Construction Management Concept and Applications judged the engineers' construction management competency and its application. The last assessment on Basic IT Concept developed to test the basic IT understanding of the engineers.
